

Dec-Flash

CRITICAL LEAK POINT PROTECTION

THE PRODUCT ADVANTAGE

Our pre-manufactured membrane flashings simplify installation for any contractor. The unique design of our 6" wrap allows the installer, using either a single or pair of units, to provide a variety of flashing solutions. One 6" unit can be cut to create an outside corner, or two door sill corners. Use two units to fully wrap or "boot" a 6" wood post or column. The convenient 4" wrap size is to be used for 4" wood post or where substrate meets vertical section installed on the outside of Dec-Tec.

Tight working areas now pose less of a problem and there is no need to worry about leaks at critical points. Made with our reinforced Guardian membrane, these strong, color-matched, flashings get the job done quicker. Be confident that your details are watertight!

FEATURES:

- Faster installation
- Helps ensure watertight details
- Eliminates producing flashings on-site
- Reduces potential for leaks at critical points
- Matching colors to Dec-Tec membranes

PACKAGING:

- Post wraps: 4" & 6" (options fit dimensional lumber)
 - 6" wrap is to be used for all flashings
 - 4" wrap is to be used on wood posts or columns only
- Sold in single units
- Custom profiles available (special order)
