

# DEC-FLASH

critical leak point protection

## THE PRODUCT ADVANTAGE

The expectation and goal of all great Dec-Tec installations is that first and foremost it provides a watertight solution protecting the consumer's investment and of equal importance it will be stunning and aesthetically beautiful. Contractors have come to the realization that utilizing the full complement of Dec-Tec system components allows them to simply achieve both of these goals.

Dec-Tec's strong, prefabricated, color-matched flashings (Dec-Flash) are manufactured in a controlled setting with the same fiberglass reinforcement that is found in all Dec-Tec membranes.

Dec-Flash simplifies the installation for the installer providing confidence and assurance that critical leak point details are properly protected, have a clean and consistent professional look to them and at the same time help get the job done quicker.

The unique design of our 4" and 6" Dec-Flash accessories provide a variety of flashing solutions.

- A single unit can be used to create an outside corner flash.
- A single unit can be cut in half to create a pair of door sill flashings.
- Two units are used to fully wrap or "boot" typical wood column posts.
- Dec-Flash is used to wrap larger wooden columns, built in protrusions or other irregularities.

## FEATURES + BENEFITS:

- Ensures watertight details at critical leak points
- Provides a consistent and clean professional look and finish
- Simplifies the installation saving valuable time
- Eliminates producing field flash on-site in adverse conditions
- Custom profiles available upon request

## PACKAGING:

- Available in 4" or 6" standard profiles
- Sold in single units
